EXISTANCE
of
GOD
ABU HAYYAN SAEED

Existence of GOD !

Abu Hayyan Saeed

Immanuel Kant (1724~1804) says, "Everything we see, we see through the two lenses of time and space. Since God is free from the constraints of time and space, human reason has no way to reach him."
In his book Critique of Pure Reason, Kant explained that when reason asks questions about transcendental realities (such as what is God?), it gets caught in contradictions (antinomies). This proves that reason is unable to answer these questions, not that it proves that God does not exist.

A young student who was freshly influenced by philosophy and atheism also possessed by the ghost of rationality (be an atheist and don't confuse philosophy and don't want the answer to everything from reason, it just can't be) asked his teacher, "Teacher, God is in our intellect, Never come".

The teacher thought for a while and took his atheist less philosophical rationalist student to the seashore, the teacher had a stick in one hand and a bucket in the other hand. Monsoon was at its peak. The angry waves of the sea were raging to swallow everything on the shore, the teacher took his student and started moving towards the angry waves of the sea, the teacher also had a bucket in his hand.

On reaching the hounding waves ,the teacher told his student “Bring all the water of this sea in this bucket” , At first, the student doubted his hearing and asked the teacher, "What should I do with the bucket ? The teacher said, "Bring all the water of the sea in this bucket." The student began to doubt his teacher's mental state and said, "Master, how can all the water of such a vast ocean come in this small bucket ?

The teacher started going back to the beach with his student. After reaching the beach, the teacher kept the bucket aside and took the stick and fell on the student and hugged the student with all his heart to crack down , the student started screaming in pain. After beating his student brutally the teacher said, " Now I answer your question, Just as the whole ocean cannot fit in this small bucket, how can God come to your intellect? The example of your intellect is like this bucket, limited and only limited... And how can the great creator of the sea be contained in it ?" How can the infinite concept of the creator of this sea come fully into your very limited bucket-like intellect! And on the day you fill the entire ocean in this bucket, that day God will also come to your understanding."

The teacher also said "keep trying".

A few days later, the same student asked the teacher, teacher, you could have explained this to me comfortably, what was the need for so much beating ?The teacher smiled and said, there are two reasons for this, the first reason is that God is remembered in pain and suffering ,when i was beating you, you were shouting so many times " Oh God save me " and the second reason is that there is a saying that has been around for hundreds of years

"Ghost of the kicks, don't listen to the talks"

In 2019, I want to talk to a Christian Irish professor of Divinity about the Bible. He asked me about my introduction and then said, "Do you believe in the Bible?" My answer was, "I don't believe in the Bible." He smiled and said, "When you don't believe in the Bible, why do you need to question the Bible?"

The Irish professor described a fact in a single sentence, "That which no one believes in and openly declares that he does not believe,So it is not necessary to ask this person questions about this thing. Take this as an example if a lawyer declares in front of a judge in a British Court that, I do not believe in the English Law. Then the judge will give a clear answer that Mr. Lawyer, if you do not believe in the English Law, then you have come to

lay eggs in my court ? Likewise when Atheists don't believe in God ,why are they questioning the existence of God ?

When the atheists openly deny God, do they have any psychological problem that they keep giving arguments on the existence or non-existence of God? Why are atheists skeptical?

One of my questions today is why dozens of different generations of human beings came into being through the evolutionary system. One type of race was enough.. Africans, Arabs, white people, Chinese, Asians, Eurasians , there was no need for so many people..One race is enough . Then why were so many races developed?

As many friends of mine say that I am a good story teller too , that’s why I describe a story of a boy and camel here in a lighter mood . read this and enjoy ..

A student failed an exam by a teacher.
The student went to the principal with a complaint that he had been wrongly failed. The principal called both the teacher and the student and asked the teacher the reason for the failure. The teacher said that the reason for the boy's failure was that he always went off topic. He would leave the topic on which he was given to write an essay and go on to a topic of his choice!
When the principal asked for an example, the teacher said that once I asked him to write an essay on spring, he wrote something like this:
Spring is a very good season and its scenery is very pleasant. In this season, there is greenery everywhere and there is a lot of greenery. Camels love this season very much and camels are very powerful animals. It is called the ship of the desert. Camels are very patient animals. They go on long journeys. and have the ability to endure hunger and thirst for a long time. Arab people love camels very much, etc.
The principal said that it may be because of relevance that he wrote on camels instead of spring, you should give him some other topic and see
The teacher said that I once told him to do it this way, write an essay on a car factory in Japan. The essay that this student wrote was something like this

Japan is a developed country and it has a unique and high position in the car industry. Japan is number one in the world in exporting cars. In our country, most of the cars are used by Japan, but the problem is that the price of petrol is very high in our country, so we should use camels for riding. Camels are very powerful animals. They are called the ship of the desert. Camels are very patient animals. They go on long journeys and have the ability to endure hunger and thirst for a long time. Arab people love camels very much.

The principal was very surprised and said that perhaps this has happened because of riding, you should have given a completely different topic. The teacher said yes, once I gave a completely different topic in which it was impossible to mention the camel. I asked him to write an essay on the computer, but the essay he wrote was something like this: The computer is a very amazing invention. The work that was not done in the previous years is done in seconds today. Computers have done a great favor on human life. Today's new generation gives great importance to computers. It is mostly used by those who are educated. But as far as the uneducated class is concerned, they do not pay attention to computers because they are busy with other activities. Especially the Buddhists who live in the deserts do not know the alphabet of computers. Therefore, in our area, these people spend most of their time with camels. Camels are very powerful animals. They are called the ship of the desert. Camels are very patient animals. They go on long journeys and have the ability to endure hunger and thirst for long days. Arabs love camels very much.
The principal heard this and said, "Then you failed right away." Then he told the student, "I will give you a chance. Sit down and write an essay that does not deviate from the topic." The student agreed. The principal asked him to write an essay on a road accident. The student wrote the essay like this:
Once we were going from Khanpur Katora to the Cholistan Desert in a car. It was raining lightly. We were passing through an area where camels cross the road. Suddenly, a camel ran into our car. The special thing about a camel is that it is neither afraid of a car nor does it move away. The camel is a very powerful animal. It is called the ship of the desert. The camel is a

very patient animal. It goes on long journeys and has the ability to endure hunger and thirst for long days. The Arabs love camels very much.
When the principal read this essay, he sat down and said, "There is no cure for you and he failed it." Now, the doubt of this student has turned into belief. That he must have been wronged and he wrote a petition to the education department,the format of the petition describes as under :

Your Excellency,
I am a very intelligent student in my class and I have deliberately failed in the annual examination. My teacher has failed me because of my ability. Sir, I have been patient with my teacher's unbearable behavior just as a camel is patient with the oppression and cruelty of its owner. The owner both makes the camel do his work and also persecutes it. And yes, let me also tell you that the camel is a very powerful animal. It is called the ship of the desert. The camel is a very patient animal. It goes on long journeys and is capable of enduring hunger and thirst for long days. The people of Arabia love the camel very much.
The example of an atheist is like that of a student who asks at the end of every lesson, "Well, tell me who created Allah?"

Look at the Cat’s family , known as The Felidae family have been split into three genera:

- Panthera (cats that roar – lions, tigers, leopards, snow leopards, clouded leopards and jaguars)
- Acinonyx (the Cheetah)
- Felis (all other 'small' cats)

My Question is why there are so many genera of Cat’s family ,and what is the need of this huge genera of Cat's family ?

It is to inform you that I am very fond of Nature, I enjoyed hundreds of Documentaries and Movies about Nature. Planet of the Apes , the BlockBuster Movie directed by Franklin James Schaffner ,this first Movie released in 1968 in the USA and in 1971 worldwide , this movie followed by many sequels ,the movie ***Planet of the Apes*** is a 1968 American science

fiction film directed by Franklin J. Schaffner and produced by Arthur P. Jacobs from a screenplay by Michael Wilson and Rod Serling, loosely based on the 1963 novel by Pierre Boulle. The film stars Charlton Heston, Roddy McDowall, Kim Hunter, Maurice Evans, James Whitmore, James Daly, and Linda Harrison. In the film, an astronaut crew crash-lands on a strange planet in the distant future. Although the planet appears desolate at first, the surviving crew members stumble upon a society in which apes have evolved into creatures with human-like intelligence and speech.

The writer of " Planet of the Apes" , Pierre Boulle, a french writer Born 1912, in Avignon, France, Pierre Boulle was baptized and raised as a Catholic, although later in life he became an agnostic was admirer of Darwin's theory of Evolution,he was known of his notable novels " The Bridge over the River Kwai" and "Planet of the Apes" .His science-fiction novel *Planet of the Apes*, in which intelligent apes gain mastery over humans, developed into a media franchise spanning over 55 years that includes nine films, two television series, comic books and popular themed merchandise.

The original film series had four sequels:

1..Beneath the Planet of the Apes (1970)

2.. Escape from the Planet of the Apes (1971)

3.. Conquest of the Planet of the Apes (1972)

4.. Battle for the Planet of the Apes (1973)

As well as followed by Television Series

1..*Planet of the Apes* (1974)

2.. *Return to the Planet of the Apes* (animated) (1975)

Remake : *Planet of the Apes* (2001): A re-imagining of the original film.

There are many Reboot Series of this Movie like,

1.. *Rise of the Planet of the Apes* (2011): A series reboot, was released on August 5, 2011, to critical and commercial success. It is the first installment in the new series of films.

2.. *Dawn of the Planet of the Apes* (2014): The second entry in the *Planet of the Apes* reboot series, was released on July 11, 2014.

3.. *War for the Planet of the Apes* (2017): The third film in the reboot series.

4.. *Kingdom of the Planet of the Apes* (2024): The fourth entry in the *Planet of the Apes* reboot series. It was released on May 10, 2024 in USA (Today ,May 16th i am still awaiting the release of this on Youtube ,Netflix or amazon)

You will surely be surprised why I am discussing the Apes Movies in detail but it was considered necessary so that you get an idea of how Darwin's theory was fantasized that Darwin's ancestors would be smarter than humans in the future.. Anyway, these movies are a must watch..

My question is who is the creator of all these monkey species ? And why did so many monkey species need for ?

I want an answer to why, not how ! Simple..

My question in 2016 to Richard Dawkins was this,
The monkey must have done many good deeds, then he became a human being in return for his good deeds, but what sin did the donkey commit that is still a donkey ?

My precious words for RD,

“I hope and pray to God that Richard Dawkins meets his ancestors, somewhere on Planet of the Apes.”

Atheists Claimed that ,
We don’t believe anything , which we can't see.

Who saw Gravity
Who saw Electricity
Who saw Molecules
Who saw Air
Who saw Internet Signals
Who saw Satellite Signal
Who saw Sound Waves
Who saw Atom
Who saw Photons .. ?
